# Pioneer and market leader with a long tradition

The success story of our brand started in the year 1865, the year of its inception. Since it was established, we have been a family-run company and have continued to develop and increase our know-how over generations. Based on over 150 years of experience in appliance engineering and later in medical refrigerators and freezers, we are continually optimizing and extending our product range. We have always been synonymous with high-quality products that meet the most stringent standards and offer maximum reliability. Our customers today include pharmacies, hospitals, clinics, research institutes in the chemical and pharmaceutical industry, blood banks and laboratories in over 100 countries.

1865 Philipp Kirsch establishes his coppersmith firm

1901 Production of beer cooling cylinders and stainless steel drop-in basins

1927 Large trade business is transformed into an industrial factory

1929 Bottled beer refrigerators manufactured from galvanized steel sheet

1970s Pharmaceutical refrigerators

1956 First electrical refrigerators

2017 New plant in Willstätt

MED 100 PRO-ACTIVE

## Innovative cooling – built in Germany, used all over the world

We take proven and reliable products to the next level. Our highly motivated development team is continuously setting high standards of product quality, functionality and efficiency.

We work in a sustainable, energy-saving and resource-efficient manner by using state-of-the-art technology and production methods. In addition, our restructured production concept speeds up product development and makes meaningful use of our capacities.

Company Kirsch is very active and engaged in DIN committees to help develop the future of cooling. For example, we have developed a new cooling technology, called magnetocaloric, which operates entirely without refrigerant. As an innovation leader in this field, we are committed to bringing magnetocalorics to the market in the nearest future.

Gerhard Müller,  
Head of Design

# Constant temperatures and optimum storage safety

Temperature stability is a decisive factor in the safe storage of sensitive chilled goods. Thanks to perfectly matched components, our products offer the best cooling conditions and the most accurate temperature control in the world. This is achieved by our newly developed PRO-ACTIVE controller with two standard built-in PT-1000 sensors. Temperature deviations in the interior can therefore be minimised to just 1.5 °C from the warmest to the coldest point (confirmed by a DIN measurement, available for models BL, MED, LABO and LABEX). The product monitoring and early pro-active warning system allows for convenient, stress free handling and fast response times which further increases safety. To guarantee this, every single one of our devices is precisely calibrated and tested in a trial run lasting several hours during final inspection. Another important benefit – in addition to the electronic control's high degree of reliability – is the reduction of power consumption of up to 60% compared to previous controllers.

## Inverter technology

Reduced energy consumption and durability are at the centre of this innovative system.

It lowers your operating costs and protects the environment. Thanks to the outstanding temperature stability, your refrigerated goods remain safely cooled at all times - even when the door is opened and after defrosting. Benefit from low-noise operation and low maintenance requirements.

### Your Advantages

- Lower energy consumption
- temperature stability
- faster cooling

## GMP-compliant and fulfilment of DIN 13277

Our newly developed cooling machines enable defrosting outside the cooling chamber. This allows us to achieve constant cooling temperatures even during defrosting, meaning that the entire cooling chamber can be qualified and your refrigerated goods are always perfectly stored in accordance with DIN 13277.

## Optimised temperature behaviour and high temperature stability

### Your Advantages

- Perfect cooling temperature even during defrosting (see diagram)
- Powerful Cooling machine - e.g. pull-down from +25°C to -25°C in 65 minutes
- Durable inverter technology with 50 and 60 Hertz
- Easy to service - cooling machine is a plug-in unit

# The highest standards and sustainable solutions

Quality assurance made easy: KIRSCH temperature documentation enables complete and precise recording and evaluation of the cooling temperature, which is also required as proof for official inspections. With the Kirsch EVOLUTION CLOUD, you don't even need an on-site network to guarantee functionality. Our systems enable the live transmission of data, alarm forwarding to the workplace and the direct sending of alerts by e-mail and SMS. Thanks to automatic data capture, our customized digital solutions are extremely resource-efficient. And more importantly: if in doubt, they serve as a reliable source of information to determine whether a certain chilled good can still be used. Our ISO-certified KIRSCH refrigerators and freezers are ideally designed especially for areas with the strictest cooling requirements. We use stable processes to ensure maximum safety and quality of our devices and services.

In addition to complying with the highest quality standards, we also consider sustainability to be a very important topic. All our products are designed for a long service life. This helps to preserve our planet's natural resources and means cost savings for our customers. At the same time, we have been able to permanently reduce power consumption as well as our noise emissions to far below the limit. With these measures, we are promoting the sustainable development of Philipp Kirsch GmbH, which is at the core of our company philosophy.

# Market leader through innovation

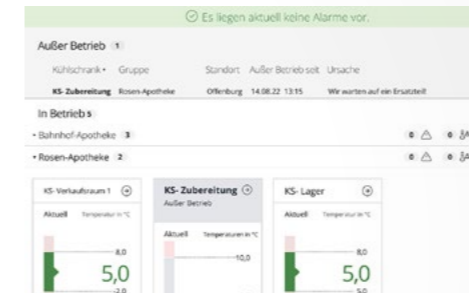

Dr. Jochen Kopitzke,  
CEO

## Cleanroom refrigerators - installation without enclosure

Every cleanroom must be planned exactly according to the requirements. We reduce your workload thanks to our new cleanroom concept with HEPA filter. We will be happy to advise you on our project-specific and customised solutions. You can find more information about our cleanroom concept on pages 16 and 17.

## KIRSCH EVOLUTION CLOUD - reliable, independent, smart

In the pharmaceutical and healthcare industries, there are strict regulations and standards that define the temperature conditions for the storage of sensitive refrigerated goods. These regulations are necessary to ensure that the stored products are kept under optimal conditions throughout their entire life cycle, from production to transport and storage in pharmacies, doctors' offices or hospitals. Our KIRSCH EVOLUTION CLOUD helps you to monitor the temperature of your refrigerated goods. Find out more on the next page.

## Service and support - please feel free to give us a call

KIRSCH offers you competent help with all your daily questions. Do you need a spare part for a KIRSCH refrigerator? Our comprehensive services offer you expert support. We also offer you a platform for secure remote access and remote maintenance via Teamviewer. We also provide service videos on our website that can help you with the configuration of your devices and other important topics. Further information on the topic of SERVICE such as briefings, qualifications, etc., can be found on page 49

## Relieve in the daily work routine

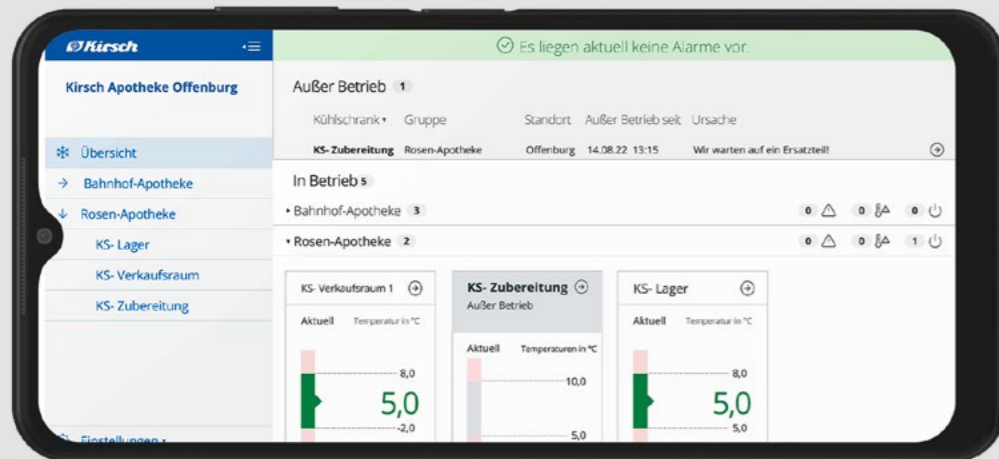

Complete temperature documentation is crucial in the process of quality assurance. The manual data collection is usually time-consuming and often inaccurate.

Our new KIRSCH EVOLUTION CLOUD takes care of this work for you, giving you more time to focus on more important tasks.

The optimal storage of your products and therefore the safety of the patients is our highest priority. With the KIRSCH EVOLUTION CLOUD, we guarantee a complete, reliable, and convenient solution for temperature documentation with automatic reporting.

In case of temperature deviations, the system will notify you via E-mail and/or SMS. Thanks to an integrated battery, this function remains active even in the event of a power failure. At the same time, this offers the possibility for mobile use, e.g. in transport boxes.

Reliable, independent,  
smart. The KIRSCH  
*EVOLUTION CLOUD.*

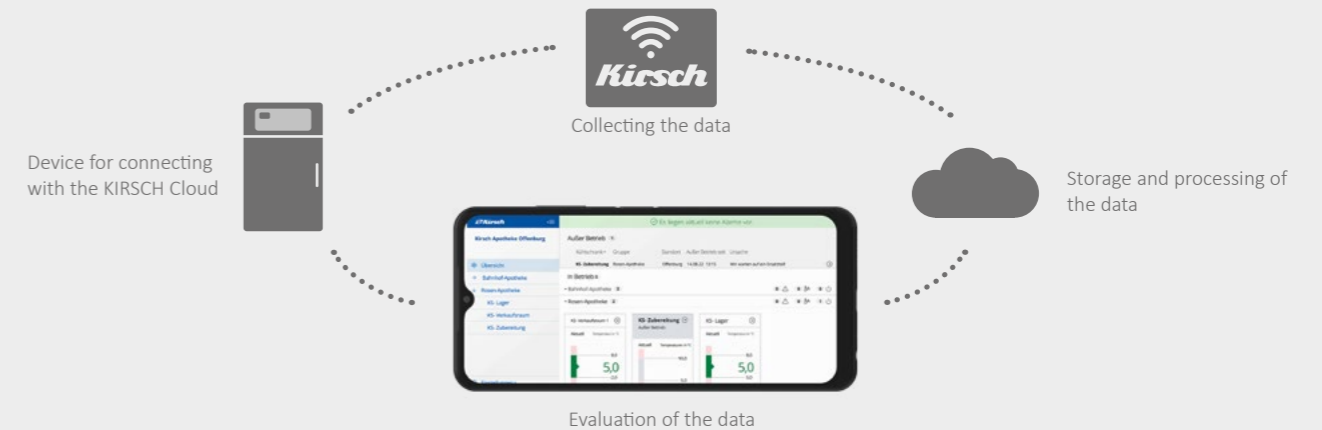

## KIRSCH EVOLUTION MODUL

The KIRSCH EVOLUTION MODUL is the reliable connection between the areas to be monitored and the cloud.

An IoT SIM card, a data storage and a PT1000 sensor required for recording and data transmission, are already included in the scope of delivery.

## Maximum storage safety through optimal connectivity

## Your advantages at a glance

### RELIABLE

- Alarm in case of deviation via E-mail and/or SMS
- Alarm chain with holiday function
- Temperature control, independent of location, possible at any time via smartphone, tablet or PC
- Additional integrated data storage for up to 30 days
- Complete temperature documentation

### INDEPENDENT

- Network-independent, no LAN or WLAN connection required
- Data transmission via integrated IoT SIM card
- Easy retrofitting to existing or third-party devices
- Battery operation in case of power failure
- Mobile use

### SMART

- Automatic reporting enables easy data backup and verification
- All relevant data at a glance at all time through access on smartphone, tablet or PC
- Simple and intuitive operation thanks to modern menu navigation
- User administration with assignment of rights
- Logbook for tracking all changes and alarms with download function
- Offline function for service, maintenance or cleaning

## Technical Data

Power supply	230 V +/- 10%, 50/60 Hz	Dimension	212 x 137 x 47 mm (BxHxT)
Power consumption	12 W	Measuring range	-200°C bis +200°C Tolerance at 25°C +/- 0,5K and +/- 0,5% from measuring range
Ambient Temperature	0°C bis +45°C	Temperature sensor	PT1000 measuring range -50°C bis +110°C (extended temperature range, possible via optional sensor)
Protection type	IP54		
Protection class	II		
Weight	ca. 530 g		

We will gladly assist you with any questions regarding the setup of the KIRSCH EVOLUTION CLOUD. Please contact us: [temperaturdoku@kirsch-medical.de](mailto:temperaturdoku@kirsch-medical.de).

# Kirsch cleanroom refrigerator

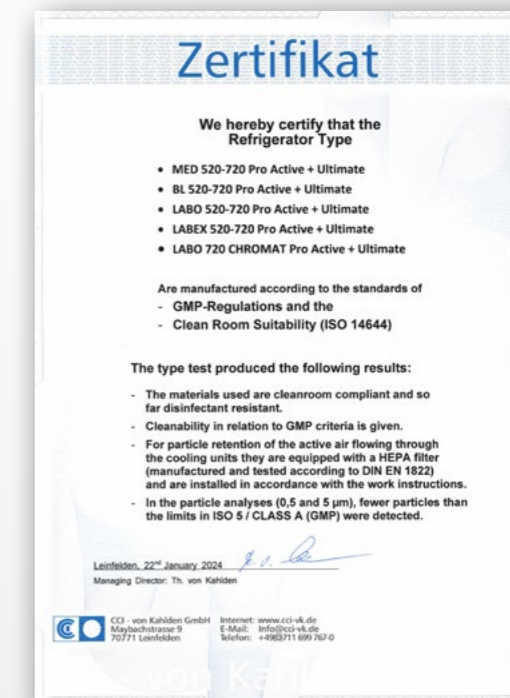

## Kirsch cleanroom refrigerator

Welcome to the future of laboratory refrigeration with Kirsch cleanroom refrigerators - the perfect stand-alone solution for your highly sensitive samples and materials. Our refrigerators combine top performance with unrivalled cleanroom suitability. Thanks to the integrated HEPA filter system, our refrigerators provide excellent air purification, ensuring a contamination-free environment and preserving the integrity of your samples. Our cleanroom concept has been tested by independent specialists and confirmed with a certificate.

Experience the flexibility and reliability of our stand-alone solution, giving you the freedom to place the refrigerator where it is needed without compromising on performance. With Kirsch cleanroom refrigerators, you are well equipped to take your research to the next level.

## Your Advantages

- Stand-alone solution: No on-site costs for enclosure of the appliance device or extraction system
- HEPA filter (removes 99.95% of particles)
- Stainless steel outer housing
- Condensation tray for manual emptying
- Disinfectant resistance tested
- GMP-compliant (with certificate)

We are pleased to present you  
our three product lines

# ULTIMATE

ULTIMATE

PROACTIVE

ESSENTIAL

- Elegant glass design
- Simple operation via a capacitive touch display (also with laboratory gloves)
- Access control with a log
- Graphical display of the temperature curve and min/max temperature
- Digital data documentation with KIRSCH Datamet software
- Intuitive help with alarm messages and troubleshooting in plain text
- Operation via remote control is possible
- Includes the benefits of the PRO-ACTIVE line

# PROACTIVE

- Reduction of power consumption by up to 60 % compared to previous controllers
- Tamper-proof thanks to key switch
- Data storage for USB export
- Fast response time to imminent malfunctions thanks to pro-active alarming
- Reduction of temperature deviation
- Highest storage safety due to PT1000 monitoring
- Optimally matched components
- The benefits of the ESSENTIAL line include

# ESSENTIAL

- Your entry into KIRSCH quality
- Maximum reliability
- Durable
- Temperature stability
- Flexibility
- Maximum safety

**Cleanroom**  
HEPA-Filter solutions for use in cleanroom environments.

**Inverter Technology**  
Thanks to this new technology, our refrigerators now consume up to 50% less energy.

**Pharmaceutical refrigerators**  
More information can be found on our website.

**Pharmaceutical freezers**  
More information can be found on our website.

# Laboratory refrigerators\* and freezers

\*compliant with DIN 13277 (replaces DIN 13221)  
also with explosion-proof interior

- Safe storage of pharmaceuticals and vaccines
- High-performance cooling machine for maximum temperature constancy even if the door has been opened for a longer period of time
- Data storage for USB export
- KIRSCH Ergonomics Concept
- Tamper-proof thanks to key switch
- Aluminium interior container
- High energy efficiency
- Environmentally friendly, high-pressure foam insulation
- Environmentally friendly refrigerant R600a
- Easy access
- Height-adjustable drawers or shelves
- Automatic defrost

## Display at eye-level

The display is positioned at eye-level to make it easier to read and use.

## Easy access

The well thought-out opening mechanism makes it even simpler to equip our devices.

## Self-closing door

Doors that are “open by accident” are a thing of the past.

## Flexible arrangement

Gibs (every 15 mm) for flexible interior arrangement.

More information can be found on our website:

Laboratory refrigerators

Laboratory freezers

# Explosion protection

Our promise - your safety!

KIRSCH was the first company in the laboratory cooling sector to adapt to the new ATEX product directive 2014/34/EU.

The interior of the devices is tested for absence of ignition sources by TÜV SÜD in conformity with Directive ATEX 2014/34/EU:

- All of the electrical equipment and components used in the interior (fans, temperature sensors, etc.) are specifically designed for use in zone 1\* and zone 2
- We also guarantee the maximum temperature stability in explosion-proof interiors
- Intrinsically safe supply to the temperature sensors in the interior
- Explosion-proof fan
- Special earthing concept for discharging electrical potential
- Plastic parts in the interior have an antistatic design

(depending on the model)

\*LABEX 465

## Liability according to ATEX operator- and product guidelines

According to the ATEX operating directive, the plant operator is responsible for the correct selection of the equipment. For the determination of the suitable EX zone (e.g. Zone 1, Zone 2), following explosion hazards, among other things, have to be taken into consideration: the explosiveness of the stored substances and the frequency of occurrence of an explosive atmosphere.

We will gladly assist you in selecting the correct explosion protected device and provide you with the technical report of the TÜV-SÜD. You will find the declaration of conformity on our website: [kirsch-medical.com/certificates/explosion-proofness](http://kirsch-medical.com/certificates/explosion-proofness).

## LABEX®-Devices

Our LABEX® models are the safest explosion-proof devices on the market that offer maximum temperature stability.

### INTRINSIC SAFETY

**Protected probes**  
The probes are protected via safety barriers

**Explosion-proof fan**  
energy limiting power supply

### CONSTRUCTIVE SAFETY

**Earthing concept**  
The user is grounded as soon as the door handle is touched. Static charge is discharged into the housing

**No spark formation**  
caused by moving parts (shelves or conductive drawers)

## ZONE 1

For usage in more demanding environment and storage of highly flammable/explosive substances, we offer even safer unique Zone 1 devices. Though without of internal fan, the units offer remarkably good temperature homogeneity.

## ATEX operating directive

In accordance with the ATEX operating directive, you as the system operator are responsible for the correct selection of your devices.

## Intrinsic safety

Use of conductive, height-adjustable drawers with a variable interior arrangement.

## Protected interior

A current discharge system prevents any static charges.

## Explosion protection

The interior is free of ignition sources.

# Temperature documentation with KIRSCH DATANET

## Maximum quality assurance for your chilled goods – complete and simply reliable

With KIRSCH-DATANET software the data from your devices (temperature curve, door openings, alarm history etc.) can be effortlessly recorded in your IT network. The network solution (PC-KIT-NET) is a standard feature of KIRSCH ULTIMATE product line and optional for the PRO-ACTIVE. Also older devices can be upgraded with this retrofittable solution.

Kirsch DATALOG can be used for retrofitting the automatic temperature documentation and monitoring system on third party devices and devcies without an RS485 interface. It has limited range of function in compare with PC-KIT-NET

## Your benefits

- Gapless temperature documentation
- Continuous monitoring
- Automatic alarm forwarding by e-mail
- Precise data evaluation and error analysis possibility, thanks to safely recorded refrigerator operating states
- Possibility to integration third-party devices
- No license fees for the software
- Minimal efforts required for documentation
- Refrigerator settings can be conveniently adjusted from the PC\*
- User administration with configurable authorization levels
- Creation of user groups with user assignment possible

Graphical representation of the temperature curve with comment function and channel selection (e.g. compressor, door contact, defrost, general error and many more).

Monitoring overview of all integrated refrigerators and freezers. Malfunctions can be seen at a glance.

Tabular overview of all measurement points with exact temperature values. This view can also be conveniently exported as a CSV file.

# Service

## Set-up service

We will be happy to help you with any questions you may have about setting up your temperature documentation system. We will also be happy to advise you on our KIRSCH-DATANET software solution and our KIRSCH EVOLUTION CLOUD.

We also offer software training for KIRSCH-DATANET so that you are familiar with all the functions and can configure and operate the software correctly.

## Remote maintenance

With our Teamviewer, we offer you a platform for secure remote access and remote maintenance. This enables our experts to diagnose and solve problems or make adjustments without having to be at the location of the computer in question.

## On-site instruction service

We teach you how to use your Kirsch refrigerators and freezers safely with our instruction service. We cover important points such as appliance design, operation, correct handling of alarms, cleaning and maintenance.

## Qualification service for Kirsch appliances

- IQ - Installation qualification
- OQ - Operation qualification
- PQ - Performance qualification

## Our service - your benefit

- Fast response times
- Competent assistance
- Specialised personnel

 We are happy to advise you.

# Accessories

KIRSCH refrigerators and freezers provide numerous equipment options that can be retrofitted even at customer location.

## KIRSCH EVOLUTION CLOUD-Module

Maximum storage safety through optimal connectivity and real-time monitoring.

## PC-KIT-NET

Automatic temperature documentation and monitoring via your network (LAN connection).

## KIRSCH-DATALOG

Retrofitting the automatic temperature documentation and monitoring system on third party devices and devices without an RS485 interface.

## Vario Support

For comfortable and quick refilling.

## Lockable drawer (top)

Protects sensitive goods from unauthorized access.

## Wire shelves

Robust shelves with a load capacity of up to 40 and 50 kg.

## External PT100/PT1000 with cold block

Additional temperature sensor for connection to existing/external monitoring system.

## Access Port

Simple insertion of an external temperature sensor with integrated cable feed-through.

## Clean room set

Enables operation in clean room thanks to special air guidance system of the cooling machine. 500/700 liter models also with HEPA filter.

## Additional cooling machine fan

Is required when the on-site ventilation of the cooling machine is not sufficient (built-in device). Please see installation drawing.

## Door coupling

Connects the furniture door to the device door.

## Decorative frame

Made of stainless steel, allows to cover door with a decorative panel (thickness max. 2 mm).

## Glass door with lock

See clearly: avoid opening the door unnecessarily to inspect the contents. Lockable.

## Side wall/ceiling interior lighting

Optional, optimal and energy-efficient lighting for the interior using an LED light strip.

## Equipped with castors

Equipped with steering and fixed castors. (depending on the model).

Used in more than 100 countries
